

Chiropractic Business OS: Demo Script

Opening

This is a focused Practice Performance Dashboard for tracking patient inquiries, follow-ups, active patients, estimated treatment value, and weekly practice performance.

Dashboard Walkthrough

Start with Total Patient Inquiries, Follow-Ups Needed, Overdue Follow-Ups, Active Patients, Estimated Treatment Value, Inquiry-to-Patient Rate, and Top Inquiry Source.

Inquiry Workflow

Show how a team member adds a fake patient inquiry, selects requested service and source, updates status, and sets the next follow-up date.

Weekly Summary

Show how the owner can review weekly activity without digging through spreadsheets or asking for a manual update.

Trust Boundary

Clarify that this is not an EHR, billing system, insurance system, or scheduling system.

Close

Ask whether seeing inquiries in one place and improving follow-up consistency would be useful enough for a small pilot.
